STREAMLINE HEALTHCARE!

"Efficiency is doing things right. Effectiveness is doing the right things"

MASTER’S THESIS SPRING 2016
Each year the Primary Care Unit adjacent to the Karolinska University Hospital treats ~30 000 patients. We are looking for an individual who would like to help them improve their work flow.

BACKGROUND
Primary Care Units adjacent to Hospital Emergency Departments have been singled out as important elements in the future health care map of Stockholm. They provide a link between primary and emergency care. These units have an essential function in relieving Emergency Departments, and increasing accessibility to the public.

The Primary Emergency Care Unit at the Karolinska University Hospital in Huddinge are responsible for the external triage (patient sorting) of all patients attending the Emergency Department. It then cares for those patients not in need of Emergency Hospital resources and can treat these patients in a time- and cost-efficient manner.

OBJECTIVE
Your mission will be to help the aforementioned Care Unit develop a new efficient flow and test it in reality. You will be supervised by a Clinical Innovation Fellow. You will learn how Healthcare works and how to work with innovation in healthcare. You will be working in a hospital setting and acquire great knowledge of the clinical routines.

APPLICANT PROFILE
We are looking for a student or a pair of students at Masters level in Applied Logistics, or Informatics who specialize in simulation of workflows or a student at Masters level in Business and Management. You should also have a keen interest in improving the healthcare sector and a desire to make an impact!

ABOUT US
You will be supervised by a team from the Clinical Innovation Fellowships (CIF) program as well as an academic supervisor. CIF is a part of Center for Technology in Medicine and Health (CTMH) and is co-financed by The Royal Institute of Technology (KTH), Karolinska Institutet (KI) and the Stockholm County Council (SLL).
